Key Points

Introduction

Small Area Labour Markets (SALM) presents regional estimates of unemployment and the unemployment rate at two small area levels:

- For approximately 2,200 Australian Bureau of Statistics (ABS) Statistical Areas Level 2 (SA2s), on a state/territory and capital city/rest of state basis, in Table 1. For the states and the Northern Territory, estimates for the capital city and the rest of state are also provided; and
- For approximately 540 Australian Local Government Areas (LGAs), in Table 2.

The estimates in Tables 1 and 2 are *smoothed* using a four-quarter average to minimise the variability inherent in small area estimates. A description of the methodology used to prepare the estimates in this publication is presented on page 49.

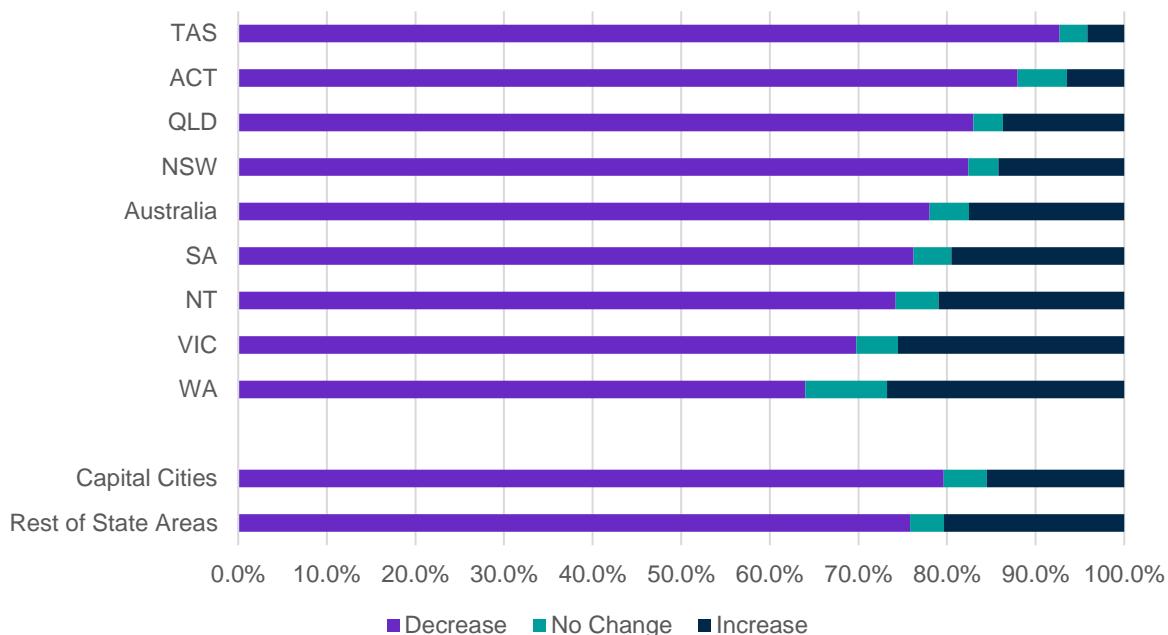

Caution: Highly disaggregated estimates of unemployment and the unemployment rate at the SA2 and LGA level can display significant variability and should be viewed with caution, particularly in regions where the ABS Statistical Area Level 4 unemployment data that underpin the SALM estimates have been exhibiting considerable volatility. As a result, quarter-to-quarter comparisons may not be indicative of actual movements in the labour market. It is therefore recommended that year-on-year comparisons be used and that large movements in the SA2 and LGA data be viewed with caution.

Further, where large movements in the SA2 and LGA estimates are encountered, or for SA2s and LGAs with a small labour force, users are advised to examine Census labour force data in addition to the SALM estimates.

Labour market developments at the Statistical Area Level 2

Almost 8 in 10 Statistical Areas Level 2 (SA2s) (78.0%) recorded a decrease in their *smoothed* unemployment rate over the year to the June quarter 2023, below the 92.7% recorded over the year to the June quarter 2022 but still relatively high compared with long-term trends.

Chart 1: Annual change in unemployment rate by state/territory (% of SA2s)

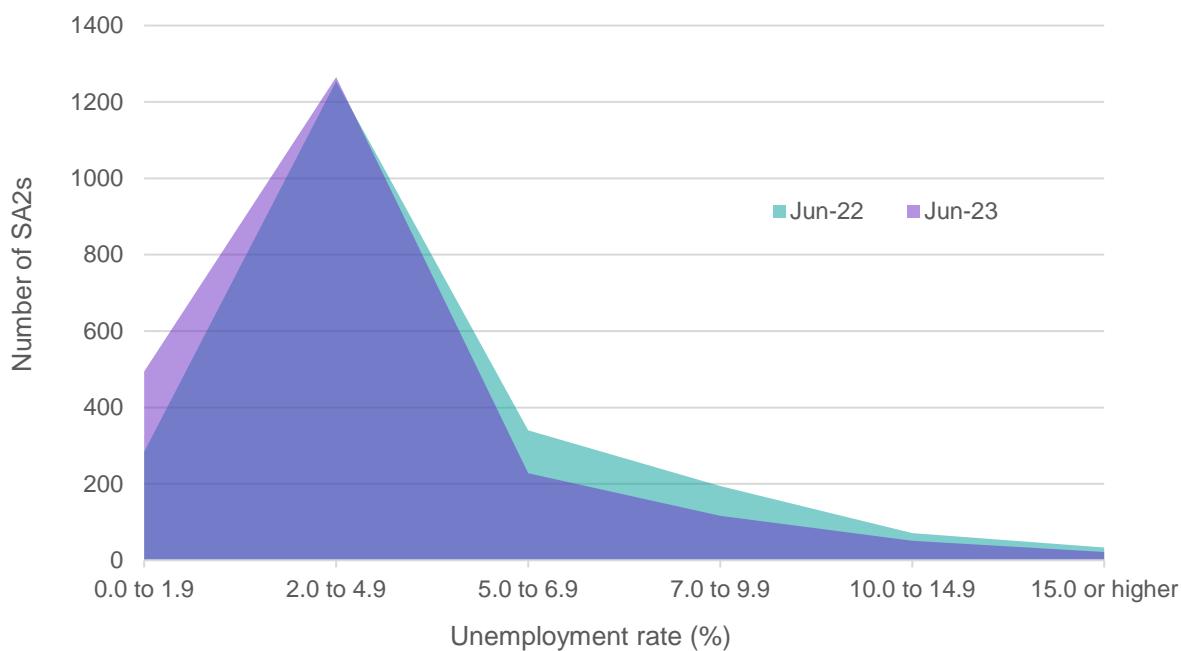

As shown in Chart 1, above, more than 9 in 10 SA2s (92.7%) in Tasmania recorded a fall in their unemployment rate over the year to the June quarter 2023. On the other hand, Western Australia had the largest proportion (26.8%) of SA2s recording an *increase* in their unemployment rate over the period.

- A higher proportion (79.6%) of SA2s in capital cities recorded a decrease in their unemployment rate, compared with those in rest of state areas (75.8%).

In the June quarter 2023, more than 8 in 10 SA2s (80.8%) recorded an unemployment rate of less than 5% while just 3.4% of SA2s recorded an unemployment rate of 10% or more.

Chart 2: Distribution of SA2s by unemployment rate

Reflecting the strong recovery in labour market conditions following the end of the COVID-19 lockdowns, there has been a significant increase in the number of SA2s with an unemployment rate of less than 5% over the past year (up from 1,538 to 1,759) – see Chart 2, above. On the other hand, the number of SA2s with an unemployment rate of 10% or higher has fallen considerably (from 104 to 73).

Local Government Area level labour market developments

Note: When interpreting the Local Government Area (LGA) data, below, it is important to bear in mind that the size of LGAs can vary considerably. Accordingly, movements in labour market indicators at the LGA level may differ from those at the SA2 level.

Almost three-quarters of LGAs (73.8%) recorded a fall in their *smoothed* unemployment rate over the year to the June quarter 2023, well below the 83.0% recorded over the previous year but is still high relative to longer-term trends. Around 8 in 10 LGAs (80.7%) recorded an unemployment rate of less than 5%, while 5.2% of LGAs recorded an unemployment rate of 10% or more (see table, overleaf).

Table: Distribution of LGAs by state/territory (%), change over the year to the June quarter 2023

State/ territory	Increase ↑	Decrease ↓	Steady ➡	Less than 5%	10% or more
NSW 	12.4	81.4	6.2	92.2	0.0
VIC 	33.8	63.8	2.5	91.3	0.0
QLD 	3.9	94.8	1.3	57.1	20.8
SA 	40.8	54.9	4.2	78.9	4.2
WA 	24.1	68.6	7.3	83.9	4.4
TAS 	3.4	96.6	0.0	72.4	0.0
NT 	47.4	52.6	0.0	47.4	15.8
ACT* 	0.0	100.0	0.0	100.0	0.0
Australia 	21.7	73.8	4.4	80.7	5.2

*The ACT is comprised of a single LGA.

Main issues

Transition to the 2021 Australian Statistical Geography Standard

Work is currently underway to transition the Small Area Labour Markets (SALM) publication onto the 2021 (Edition 3) *Australian Statistical Geography Standard* (ASGS). This change will be made in the September quarter 2023 release of SALM.

Updated LGA structure

The June quarter 2023 release of SALM contains LGA estimates based upon the 2023 LGA structure. There were only minor differences between this and the previous LGA structure – see [the ABS ASGS page on the LGA structure for more details](#).

Impact of COVID-19 on Small Area Labour Markets estimates

The COVID-19 pandemic began to have a significant, negative impact on the Australian labour market from March 2020 - when Australia recorded its 100th COVID-19 case and the initial shutdown of non-essential services and trading restrictions took effect. Similarly, the Delta lockdowns that commenced in mid-2021 also restricted labour demand and supply.

The high rates of infection during the Omicron outbreak in the first months of 2022, however, did not result in lockdowns or travel restrictions in any jurisdictions (with the exception of Western Australia), while trading restrictions were eased. That said, workplace absences, illness and reduced foot traffic during the Omicron wave affected labour demand and supply.

It is worth bearing in mind that the *smoothed* Small Area Labour Markets (SALM) series, which is created by averaging four quarters of *unsmoothed* SALM data, lags actual changes in labour market conditions. It is also important to note that if labour market conditions in a region have varied significantly over the four quarters, the *smoothed* estimate will be an average of those different prevailing labour market conditions, rather than reflecting conditions in any particular quarter.

It is also worth noting that the labour market's adjustment to COVID-19 has not been fully reflected in changes to the level of unemployment and the unemployment rate. At various times since March 2020, lockdowns implemented to control the spread of COVID-19 tended to result in a large number of people leaving the labour force. As these people were no longer participating in the labour force, they were not counted as unemployed by the Australian Bureau of Statistics, leading to a much smaller increase in the unemployment rate than would have otherwise been expected, given the significant fall in employment that occurred during the lockdowns.

Given both the large number of people who left the labour force at different times during the pandemic, and the lag from the smoothing process, care should be exercised when interpreting SALM data from the June quarter 2020 onwards.

Changes to mutual obligation requirements in some areas

Mutual obligation requirements are tasks and activities that people agree to undertake while they are receiving certain types of income support, including the JobSeeker Payment and Youth Allowance (other) payment. From time-to-time, and for a range of reasons, these requirements can be suspended. During the September quarter 2021, for example, mutual obligation requirements were temporarily paused in areas affected by the Delta COVID-19 variant and associated lockdowns. More recently, mutual obligation requirements were suspended in various regions affected by flooding.

The suspension of mutual obligation requirements can have an impact on the Small Area Labour Markets (SALM) data. This is because the Australian Bureau of Statistics only considers someone to be unemployed if they are *actively looking* for work. When mutual obligation requirements are suspended, it is possible that some job seekers may not have undertaken the job search that they normally would have, in which case they would be considered to be not in the labour force rather than unemployed.

For more information on mutual obligation requirements, please see the [Services Australia website](#).

Using unsmoothed Small Area Labour Markets data during the COVID-19 pandemic

Jobs and Skills Australia continues to recommend that Small Area Labour Markets (SALM) users analyse the *smoothed* SALM data, given the high degree of volatility that is inherent in small area estimates. That said, it is clear that some users, seeking to understand better the impact of COVID-19 on conditions at the small area level, may prefer to analyse data in the *unsmoothed* SALM series. While the *unsmoothed* data are likely to better reflect changes in labour market conditions during a period of considerable flux, the data are also subject to high levels of statistical variability which may have been exacerbated during the COVID-19 pandemic. Accordingly, analysis conducted on the *unsmoothed* SALM series should be undertaken with a high degree of caution, as any movements could reflect statistical variability, rather than actual changes in labour market conditions.

Next issue

It is anticipated that the September quarter 2023 issue of Small Area Labour Markets (SALM) will be released in either December 2023 or January 2024.

Contact details

This report was prepared by the Labour Market Analysis and Advice Section within the Labour Market and Migration Branch. For further information, please email the Small Area Labour Markets inbox at SALM@jobsandskills.gov.au.

Source: Data for Australia, the States and Territories are from ABS, *Labour Force, Australia, Detailed*. Data are 12-month averages of *original* estimates so as to be comparable with the SALM data.

* Due to the small size of the labour force, particular care should be exercised when interpreting these estimates.

** The ACT is not divided into separate LGAs. The total for the Territory has been included for comparative purposes.

† The ABS notes that the quality of the correspondence used to produce this LGA is poor. Accordingly, please use these figures with caution, as concordance error may limit how much they reflect actual labour market conditions in the LGA.

Explanatory notes

Structure of regional estimates in Tables 1 and 2

State/Territory data by Statistical Area Level 2 (SA2) and Local Government Area (LGA) are presented in Tables 1 and 2, respectively. For the states and the Northern Territory, estimates for the capital city and the rest of state area are also presented in Table 1.

There are around 2,300 SA2s (approximately 2,200 of which have published estimates) and 540 LGAs in Australia. The SA2s are a geographical unit that aggregate to the Statistical Areas Level 4 in the Australian Bureau of Statistics' (ABS) *2016 Australian Statistical Geography Standard* (ASGS), upon which the ABS *Labour Force Survey* data are based. The SA2 estimates are then concorded to the LGA level in Table 2 using population weights, based on the latest available SA2 to LGA correspondence from the ABS.

Methodology

The estimates in Tables 1 and 2 are based on the Structure Preserving Estimation (SPREE) methodology, which enables the generation of small area unemployment, unemployment rate and labour force estimates. Given the level of disaggregation involved, the data are *smoothed* (i.e. averaged) over four quarters to dampen the variability inherent in the small area estimates.

The estimates presented in Table 1 and 2 are derived from three primary data sources:

1. Current recipients of Youth Allowance (other), and current recipients of JobSeeker Payment who are not on a zero rate of payment, by Statistical Area Level 2 (SA2);
2. Australian Bureau of Statistics (ABS) *Labour Force Survey* data by ABS Statistical Area Level 4 (SA4). The ABS *Labour Force Survey* samples private and non-private dwellings (approximately 26,000 households) across Australia, resulting in a sample of about 50,000 people. More details about the methodology underpinning this survey are included in the ABS publication, [Labour Force, Australia](#); and
3. Participation rate data at the SA2 level from the Census of Population and Housing (the latest Small Area Labour Markets (SALM) data use the 2016 Census but estimates prior to the March quarter 2014 use 2011 Census benchmarks).

The purpose of SPREE is to produce small area labour market estimates that reflect the regional disparities of the Centrelink data, while being consistent with *ABS Labour Force Survey* estimates.

Unemployment estimates are produced by apportioning the level of unemployment at the SA4 level, as published by the ABS, across each of the SA2s within that region. This apportioning is based on the distribution of Centrelink JobSeeker and Youth Allowance (other) beneficiaries at the SA2 level, benchmarked by ABS unemployment estimates by age, sex and marital status at the Greater Capital City Statistical Area (GCCSA) level.

Labour force estimates are produced by:

- taking the participation rate for each SA2 from the Census (in instances where an SA2 does not have a participation rate, the participation rate for the SA3 is used as a proxy);
- applying this to the latest available ABS estimated resident population (ERP) data for persons aged 15 and over for the SA2, to produce a labour force weighting for the SA2 within the SA4; and then
- allocating the total labour force for each ABS SA4 to the SA2s within that region according to the labour force weighting.

By using Census participation rates and the latest available ERP, the SA2 labour force estimates are able to adjust to changes in the distribution of population within an SA4 that have occurred since the last Census.

Unemployment rate estimates are produced by calculating the level of unemployment as a proportion of the labour force (consistent with ABS methodology).

As the reliability of estimates at the SA2 level are related to the size of the SA2, estimates are only published for SA2s that have a labour force of 100 or more, as at the June quarter 2021. In addition, higher levels of caution should still be exercised when interpreting movements in the estimates for SA2s or Local Government Areas (LGAs) with a labour force of less than 1,000.

- While the underlying methodology used to produce the small area estimates in SALM is robust for the vast majority of areas, in a small number of cases it can result in figures that do not accurately reflect labour market conditions within the region. As this is the case for the SA2 and LGA of Aurukun, these figures are not published.

Due to both the methodology used and the significantly higher variability of the data disaggregated below the SA2 or LGA level, it is not possible to derive reliable unemployment and unemployment rate estimates for particular groups (i.e. males, females, youth) within an SA2 or LGA.

The geographical structure used for Small Area Labour Markets

As of the June quarter 2019 edition of Small Area Labour Markets (SALM), the Statistical Area Level 2 (SA2) estimates are based on the Australian Bureau of Statistics (ABS) 2016 *Australian Statistical Geography Standard* (ASGS).

Due to changes in the ASGS between the 2011 and 2016 editions, there were a number of breaks in series at the SA2 level. As the production of *smoothed* SALM data requires four consecutive quarters of *unsmoothed* estimates, *smoothed* data for those SA2s and Local Government Areas that experienced a break in the *unsmoothed* series (between the March and June quarter 2019) are only available starting from the March quarter 2020. Between the June and December quarters 2019, the only available estimates for these SA2s are from the *unsmoothed* series.

- For more information on the ASGS changeover, please see the *SALM 2016 Changeover User Guide – 2022 Update* available on the SALM Methodology page on the [Jobs and Skills Australia website](#). Similarly, the *unsmoothed* SALM estimates can also be downloaded from the SALM Methodology page.

It is worth noting that Jobs and Skills Australia will be transitioning to the 2021 (Edition 3) ASGS in the September quarter 2023 SALM release.

Smoothed estimates not available for all regions

While most Statistical Areas Level 2 (SA2s) and Local Government Areas (LGAs) have a complete time series of data, with *smoothed* Small Area Labour Markets (SALM) estimates available from the December quarter 2010 onwards, some regions have a shorter time series, while others have no estimates at all.

There are three reasons why data are not available for every SA2 and LGA:

1. A ‘break in series’: some regions have a break in series such that only a partial time series is available. Most of the series breaks were a result of SALM moving from the 2011 to the 2016 version of the *Australian Statistical Geography Standard* (ASGS), as detailed above.
2. The SA2 is considered too small: there are around 100 SA2s which Jobs and Skills Australia considers have too small a population to produce estimates of a reasonable quality.
3. Other factors: rarely, even though the region has a sufficiently large population, the methodology used in SALM will not produce estimates considered appropriate for publishing. This is why no estimates have been published for the SA2 and LGA of Aurukun since the June quarter 2017.

Derivation of employment estimates

The data in Tables 1 and 2 in this publication are synthetic estimates, based on Australian Bureau of Statistics unemployment and Centrelink JobSeeker and Youth Allowance (other) beneficiary numbers and labour force data from the *Labour Force Survey* and the Census. As the production of Small Area Labour Markets (SALM) does not involve the use of any sources of, or attempt to estimate, the level of employment in a Statistical Area Level 2 or Local Government Area, employment estimates should not be derived from these statistics. For more information, please email the SALM inbox at SALM@jobsandskills.gov.au.

Other sources of information

This publication, as well as data files in Excel format containing estimates back to the December quarter 2010, can be downloaded from the Small Area Labour Markets page on the [Jobs and Skills Australia website](#).

Unsmoothed series

The *smoothed* estimates presented in Tables 1 and 2 are Jobs and Skills Australia’s official estimates of unemployment and the unemployment rate at the Statistical Area Level 2 and Local Government Area level. It is recognised, however, that some advanced users may need access to the *unsmoothed* estimates, which are used to produce the official figures. They are available on the Small Area Labour Markets Methodology page on the [Jobs and Skills Australia website](#).

Estimates on the 2011 Australian Statistical Geography Standard

Due to the 2021 Census-related population rebenchmarking, 2011 *Australian Statistical Geography Standard* (ASGS) Statistical Area Level 2 (SA2) estimates from the September quarter 2016 up to the March quarter 2019 were revised in the December quarter 2022 publication. If users need to obtain the latest available 2011 ASGS SA2 or Local Government Areas estimates for areas that have had a break in series, please email the Small Area Labour Markets inbox at SALM@jobsandskills.gov.au.

Glossary of useful Small Area Labour Markets (SALM) terms and acronyms

ABS – see Australian Bureau of Statistics

ASGS – see Australian Statistical Geography Standard

Australian Bureau of Statistics (ABS)

Australia's national statistical agency. For more information, see the [ABS website](#).

Australian Statistical Geography Standard (ASGS)

The ABS' set of geographical classifications for Australia - SALM uses the ASGS Main Structure. The ASGS is updated every 5 years. While the latest available ASGS is Edition 3 ('2021 ASGS'), the SALM publication is based on Edition 2 ('2016 ASGS'). For more information on ASGS 2016, see the [ASGS publication page](#).

Broken series

A series is "broken" when changes to the geography of a region (or, in some cases, other factors) mean figures for one period are not strictly comparable with figures for an earlier or later period (this can happen when SA2 boundaries are changed due to ASGS revisions, for example). In SALM, most [Statistical Area Level 2](#) and [Local Government Areas](#) have a complete *smoothed* time series back to the December quarter 2010.

SALM figures are also available prior to 2010 based on the [Australian Standard Geographical Classification \(ASGC\)](#). However, even if a region maintained consistent geographic boundaries across the change from the ASGC to the ASGS, methodological issues mean that data from 2010 onwards are not strictly comparable with the ASGC estimates for earlier years.

For more information on SALM breaks in series, see the [SALM Methodology page](#).

Capital Cities – see Greater Capital City Statistical Area

Centrelink Data

For the purposes of the SALM publication, 'Centrelink data' refers to the following income support payments:

- Youth Allowance (other)
- JobSeeker Payment
- Newstart Allowance (replaced by the JobSeeker Payment in March 2020)

These payments are an important component of SALM, the purpose of which is to present small area estimates of unemployment that reflect the regional disparities of these Centrelink data. For more information on these payments, see the [JobSeeker Payment](#) and [Youth Allowance](#) pages on the Services Australia website.

Correspondence – see Geographic correspondence

COVID-19

Australia recorded its 100th case of COVID-19 in March 2020. This was also when the shutdown of non-essential services and trading restrictions took effect.

The ‘Delta’ wave began in mid-2021, leading to prolonged lockdowns, particularly in south-eastern Australia.

The ‘Omicron’ outbreak, in the first months of 2022, did not result in any lockdowns or travel restrictions, with the exception of Western Australia.

Delta outbreak – see COVID-19

Employment

For the purposes of SALM, the term ‘employment’ refers to the ABS definition: people aged 15 years and over who worked for an hour or more during the survey reference week or for some cases where people had a job but were away from work (e.g., because they were unwell or were on leave). For a more comprehensive definition, see the Glossary on the [latest Labour Force Survey methodology page](#).

ERP – see Estimated Residential Population

Estimated Residential Population (ERP)

The official ABS estimate of Australia’s usually resident civilian population. SALM uses ERP estimates from the ABS’ [Regional Population by Age and Sex](#).

GCCSA – see Greater Capital City Statistical Area

Geographic correspondence

Geographic correspondences are used to mathematically apportion data from one geographic area to another. A population-weighted geographic correspondence is used to apportion SALM data from the [Statistical Area 2](#) level to the [Local Government Area](#) level. For more information about geographic correspondences, see the ABS’ [Information Paper](#) on converting data to the ASGS.

Greater Capital City Statistical Area (GCCSA)

The GCCSAs form part of the ABS’ Australian Statistical Geography Standard (ASGS) Main Structure. GCCSAs can be divided into two groups: capital cities and rest of state areas. The capital cities are designed to represent the functional extent of each of the 8 capital cities, while the rest of state areas represent the remainder (the area not covered by the capital cities). See the [2016 ASGS page](#) for more information.

Jobs and Skills Australia (JSA)

The agency responsible for producing the SALM publication. Please see the [JSA website](#) for more information about the agency and its work.

JobSeeker Payment – see Centrelink Data

JSA – see Jobs and Skills Australia

Labour force

In labour statistics, labour force refers to those people who are either [employed](#) or [unemployed](#).

Labour Force Survey (LFS)

A monthly survey carried out by the [ABS](#) that provides information about the labour market activity of Australia's resident civilian population. [Unemployment](#) and [labour force](#) estimates from the LFS are important inputs into the process used to produce the SALM data. For more information about the LFS methodology, see the [latest LFS methodology page](#).

LFS – see Labour Force Survey

LGA – see Local Government Area

Local Government Area (LGA)

LGAs represent the ABS' approximation of gazetted local government boundaries as defined by each state and territory. The ABS reviews the LGA boundaries annually. Jobs and Skills Australia tries to publish SALM LGA data on the latest available LGA boundary structure in the ASGS. For more information on LGAs, see the [LGA page](#) within the ABS' ASGS publication page.

Mutual obligation requirements

Mutual obligation requirements are tasks and activities that people agree to do while they are receiving certain types of income support, including the [JobSeeker Payment](#) and [Youth Allowance \(other\)](#) payment. For more information about mutual obligation requirements, see the [Services Australia website](#).

Newstart Allowance – see Centrelink Data

Omicron outbreak – see COVID-19

Rebenchmarking

The [Labour Force Survey \(LFS\)](#) data upon which the SALM figures rely are based upon population estimates which are provisional and are revised as further relevant data become available. In the context of SALM data, earlier SALM estimates are revised periodically when the ABS rebenchmarks the LFS or [Estimated Residential Population](#) (ERP) data which are used to produce SALM.

ABS LFS estimates are rebenchmarked on a quarterly basis so that they remain consistent with the latest available ERP data. As a result, earlier SALM estimates are also revised to reflect the latest available LFS data. For more information on rebenchmarking and its affect on SALM data, see the [SALM page](#).

Rest of State areas – see Greater Capital City Statistical Areas

SA2 – see Statistical Area Level 2

SA4 – see Statistical Area Level 4

SALM – see Small Area Labour Markets

Series break – see Broken series

Small Area Labour Markets (SALM)

Quarterly estimates of [unemployment](#) and the [unemployment rates](#), produced by Jobs and Skills Australia, using the Structure Preserving Estimation (SPREE) methodology. See the [SALM page](#) for more information.

Smoothed estimates

In SALM, 'smoothing' refers to the process of applying a 4-quarter rolling average to unsmoothed SALM estimates to dampen some of the variability that is inherent in the figures. For more information on smoothed SALM estimates, see the [Using SALM data – with caution](#) section on the SALM page.

SPREE – see Structure Preserving Estimation

Statistical Area Level 2 (SA2)

Relatively small (in terms of population size) general purpose areas that represent a community which interacts together socially and economically. The SA2 is the smallest area for which the ABS releases non-Census data. For more information, see the [SA2 section](#) of the 2016 ASGS publication page.

Statistical Area Level 4 (SA4)

Areas that were primarily designed for the output of ABS [Labour Force Survey](#) (LFS) data. There are 87 SA4s for which LFS estimates are available. For more information, see the [SA4 section](#) of the 2016 Australian Statistical Geography Standard publication page, noting that the ABS combines the two Western Australia - Outback SA4s (North and South) into a single region for the purpose of LFS estimates.

Structure Preserving Estimation (SPREE)

The methodology used to produce the SALM estimates. In the context of SALM, SPREE seeks to produce reliable estimates of unemployment, labour force and the unemployment rate that are consistent with the corresponding ABS [Labour Force Survey](#) figures.

Synthetic estimates

Estimates based on data that has been modelled, rather than collected directly from a census, survey or through administrative processes. SALM estimates are synthetic because they are generated using data from a combination of sources (census, survey and administrative) in a model (the SPREE methodology). Synthetic estimates are subject to modelling error, as well as the sources of error affecting their inputs.

Unemployment

For the purposes of the SALM publication, 'unemployment' refers to the ABS definition of unemployment: people aged 15 and over who were not employed during the survey reference week and were actively looking for work and available to start work. For a more comprehensive definition, see the Glossary on the [latest Labour Force Survey methodology page](#).

Unemployment rate

The level of unemployment expressed as a percentage of the labour force.

Unsmoothed estimates

In the SALM publication, quarterly data are unsmoothed if they are not averaged (i.e., smoothed) over four quarters. Jobs and Skills Australia recommends that users use smoothed SALM data, where possible. Users should take care when interpreting unsmoothed SALM data as they can be highly volatile. More information on unsmoothed SALM data can be found on the [SALM – Methodology page](#).

Youth Allowance (other) payment – see Centrelink Data
