Key Points

Introduction

Small Area Labour Markets (SALM) presents regional estimates of unemployment and the unemployment rate at two small area levels:

- For approximately 2,300 Australian Bureau of Statistics (ABS) Statistical Areas Level 2 (SA2s), on a state/territory and capital city/rest of state basis, in Table 1. For the states and the Northern Territory, estimates for the capital city and the rest of state are also provided; and
- For approximately 540 Australian Local Government Areas (LGAs) in Table 2.

The estimates in Tables 1 and 2 are *smoothed* using a four-quarter average to minimise the variability inherent in small area estimates. A description of the methodology used to prepare the estimates in this publication is presented in the [Explanatory Notes section](#).

Caution: Highly disaggregated estimates of unemployment and the unemployment rate at the SA2 and LGA level can display significant variability and should be viewed with caution, particularly in regions where the ABS Statistical Area Level 4 unemployment data that underpin the SALM estimates have been exhibiting considerable volatility. As a result, quarter-to-quarter comparisons may not be indicative of actual movements in the labour market. It is therefore recommended that year-on-year comparisons be used and that large movements in the SA2 and LGA data be viewed with caution.

Further, where large movements in the SA2 and LGA estimates are encountered, or for SA2s and LGAs with a small labour force, users are advised to examine Census labour force data in addition to the SALM estimates.

Labour market developments by Statistical Area Level 2¹

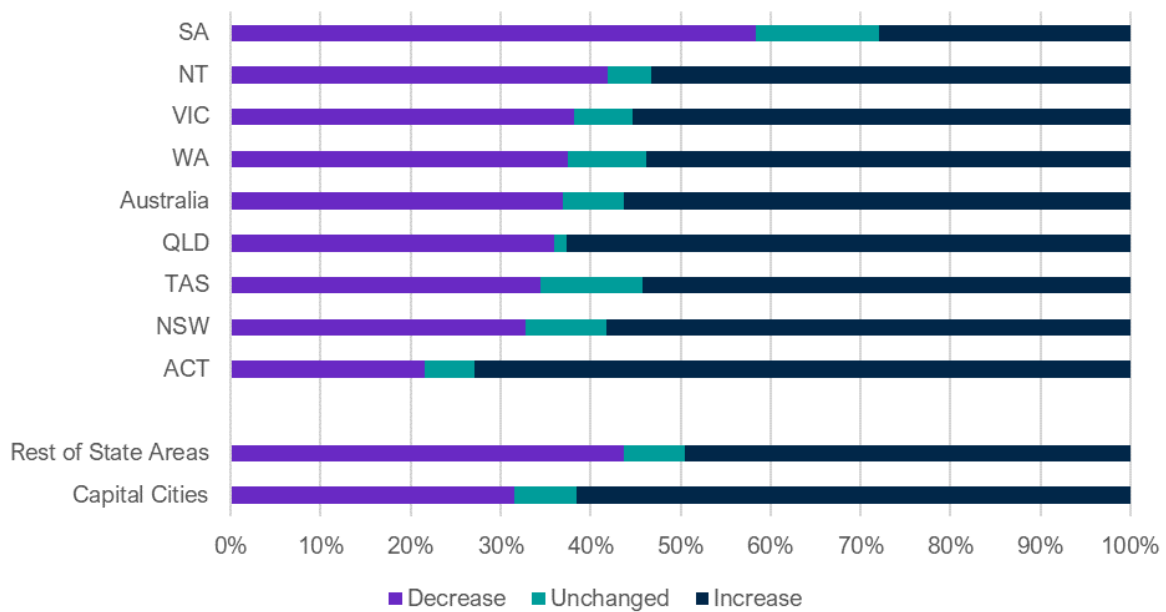

Around a third (36.9%) of SA2s recorded a decrease in their *smoothed* unemployment rate over the year to the June quarter 2024. This is significantly lower than the 78.7% recorded over the year to the June quarter 2023 and is consistent with a softening in labour market conditions that occurred during the second half of 2023 and into 2024.

There was considerable disparity in labour market conditions across the states and territories over the year to the June quarter 2024. For instance, as shown in Chart 1, overleaf, well over half (58.4%) of SA2s in South Australia recorded a fall in their unemployment rate, while almost three-quarters (72.9%) of SA2s in the Australian Capital Territory recorded an *increase* in their unemployment rate over the period.

- A higher proportion (43.8%) of SA2s in rest of state areas recorded a decrease in their unemployment rate, compared with those in capital cities (31.6%).

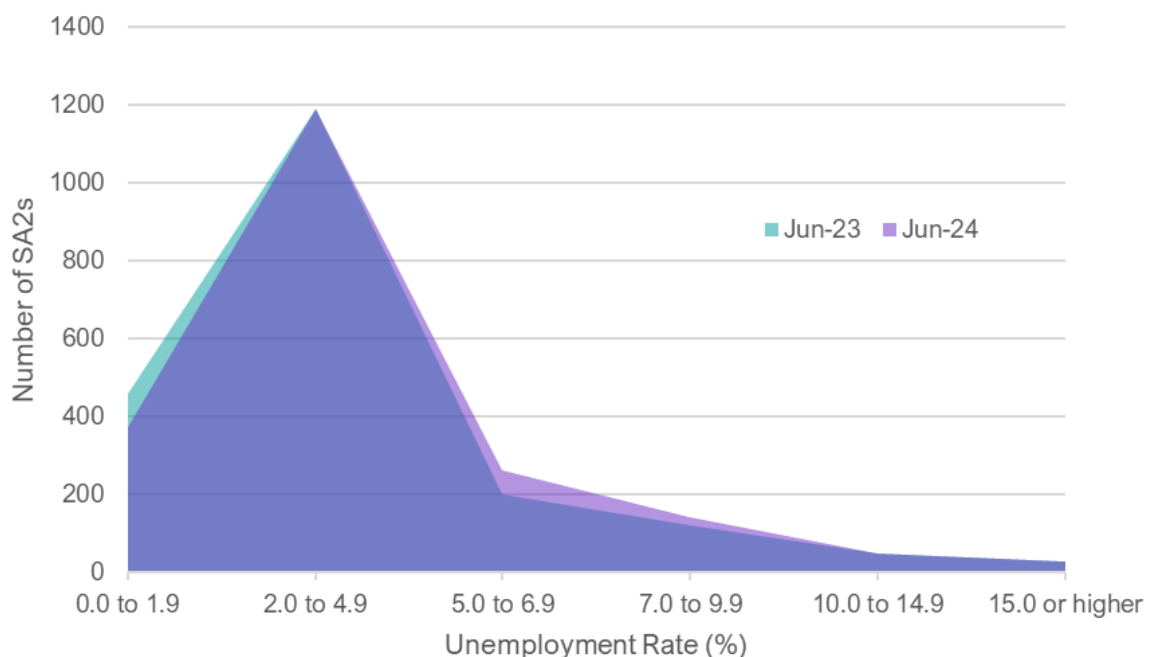

¹ The analysis in this section only includes those SA2s for which data are available for both the June quarters 2023 and 2024. Please note that, due to breaks in series because of the shift to the 2021 ASGS in the September quarter 2023, there are no smoothed data for one or both of these quarters for 292 SA2s.

Chart 1: Annual change in unemployment rate by state/territory (% of SA2s)

In the June quarter 2024, more than three-quarters of SA2s (76.6%) recorded an unemployment rate of less than 5%, while just 3.7% of SA2s recorded an unemployment rate of 10% or more.

Chart 2: Distribution of SA2s by unemployment rate

As illustrated in Chart 2, above, the number of SA2s with an unemployment rate of less than 5% decreased over the year, from 1,649 in the June quarter 2023, to 1,565 in the June quarter 2024. At the same time, the number of SA2s with an unemployment rate of 10% or more increased slightly, from 74 in June quarter 2023, to 75 in the June quarter 2024.

Local Government Area labour market developments²

Note: When interpreting the LGA data, below, it is important to bear in mind that the size of LGAs can vary considerably. Accordingly, movements in labour market indicators at the LGA level may differ from those at the SA2 level.

Table 1: Distribution of LGAs by state/territory (%), change over the year to the June quarter 2024

State/ territory	Increase ↑	Decrease ↓	Steady →	Less than 5%	10% or more
NSW 	45.6	44.8	9.6	87.2	0.0
VIC 	50.0	41.0	9.0	87.2	0.0
QLD 	54.1	44.3	1.6	70.5	8.2
SA 	23.9	62.7	13.4	83.6	3.0
WA 	67.3	28.8	3.8	81.7	2.9
TAS 	48.3	31.0	20.7	72.4	0.0
NT 	35.3	47.1	17.6	47.1	41.2
ACT* 	100.0	0.0	0.0	100.0	0.0
Australia 	49.0	42.3	8.7	81.1	3.5

*The ACT is comprised of a single LGA.

² The analysis in this section only includes those LGAs for which data are available for both the June quarters 2023 and 2024. Please note that, due to breaks in series because of the shift to the 2021 ASGS in the September quarter 2023, there are no smoothed data for one or both of these quarters for 61 LGAs.

Less than half of LGAs (42.3%) recorded a fall in their *smoothed* unemployment rate over the year to the June quarter 2024, compared with 77.6% of LGAs over the year to the June quarter 2023. These results are consistent with a softening in labour market conditions in the second half of 2023 and into 2024. More than 8 out of 10 LGAs (81.1%) recorded an unemployment rate of less than 5% in the June quarter 2024, while 3.5% of LGAs recorded an unemployment rate of 10% or more (see Table 1, above).

Main Issues

Recent changes to the geographic structure

As of the September quarter 2023 edition of SALM, the SA2 estimates are now based on the ABS 2021 *Australian Statistical Geography Standard (ASGS)*.

Due to changes in the ASGS between the 2016 and 2021 editions, there are a number of breaks in the series for SALM estimates at both the SA2 and LGA level. For more information, please see the *SALM 2021 ASGS Changeover Guide* in the [Geography](#) section of the SALM methodology page on the Jobs and Skills Australia (JSA) website.

Smoothed estimates not available for all published SA2s and LGAs prior to the June quarter 2024

The production of smoothed SALM estimates requires four consecutive quarters of unsmoothed data. Accordingly, smoothed estimates are not available prior to the June quarter 2024 for those SA2s and LGAs that experienced a break in the unsmoothed series between the June and September quarters 2023 (when SALM transitioned from the 2016 ASGS to the 2021 ASGS).

The only available estimates between the September quarter 2023 and the March quarter 2024, inclusive, for these SA2s and LGAs are from the unsmoothed series, available on the [SALM methodology page](#) on the JSA website. As is always the case for unsmoothed data, it is important to exercise significant caution when examining and interpreting these figures, as they exhibit far greater volatility than the smoothed series.

Changes to mutual obligation requirements in some areas

Mutual obligation requirements are tasks and activities that people agree to undertake while they are receiving certain types of income support, including the JobSeeker Payment and Youth Allowance (other). From time-to-time, and for a range of reasons, these requirements can be suspended. During the September quarter 2021, for example, mutual obligation requirements were temporarily paused in areas affected by the Delta COVID-19 variant and associated lockdowns. More recently, mutual obligation requirements were suspended in various regions affected by flooding.

The suspension of mutual obligation requirements can have an impact on the SALM data. This is because the ABS only considers someone to be unemployed if they are *actively looking* for work. When mutual obligation requirements are suspended, it is possible that some job seekers may not have undertaken the job search that they normally would have, in which case they would be classified as not in the labour force rather than unemployed.

For more information on mutual obligation requirements, please see the [Services Australia website](#).

Next issue

It is anticipated that the September quarter 2024 issue of SALM will be released in December 2024.

Contact details

This report was prepared by the Labour Market Analysis and Advice Section within the Labour Market and Migration Branch. For further information, please email the SALM inbox at SALM@jobsandskills.gov.au.

Source: Data for Australia, the States, Territories and the Greater Capital City Statistical Areas are from ABS, *Labour Force, Australia, Detailed*. Data are 12-month averages of *original* estimates so as to be comparable with SALM data.

Note: Dashes indicate a quarter for which data are not available for the region in question (see the section on "Smoothed estimates not available for all regions" in the explanatory notes for more information).

* Due to the small size of the labour force, particular care should be exercised when interpreting these estimates.

Source: Data for Australia, the States and Territories are from ABS, *Labour Force, Australia, Detailed*. Data are 12-month averages of *original* estimates so as to be comparable with the SALM data.

Note: Dashes indicate a quarter for which data are not available for the region in question (see the section on "Smoothed estimates not available for all regions" in the explanatory notes for more information).

* Due to the small size of the labour force, particular care should be exercised when interpreting these estimates.

** The ACT is not divided into separate LGAs. The total for the Territory has been included for comparative purposes.

† The ABS notes that the quality of the correspondence used to produce this LGA is poor. Accordingly, please use these figures with caution, as concordance error may limit how much they reflect actual labour market conditions in the LGA.

Explanatory notes

Structure of regional estimates in Tables 1 and 2

Statistical Area Level 2 (SA2) and Local Government Area (LGA) data are presented in Tables 1 and 2, respectively, by state/territory (as well as by capital city/rest of state area for Table 1). For the states and the Northern Territory, estimates for the capital city and the rest of state area are also presented in Table 1.

There are around 2,500 SA2s (approximately 2,300 of which have published estimates) and 540 LGAs in Australia. The SA2s are a geographical unit that aggregate to Statistical Areas Level 4 (SA4) in the Australian Bureau of Statistics' (ABS) *2021 Australian Statistical Geography Standard (ASGS)*. The SA2 estimates are then concorded to the LGA level in Table 2 using population weights, based on the latest available SA2 to LGA correspondence from the ABS.

Methodology

The estimates in Tables 1 and 2 are based on the Structure Preserving Estimation (SPREE) methodology, which enables the generation of small area unemployment, unemployment rate and labour force estimates. Given the level of disaggregation involved, the data are *smoothed* (i.e. averaged) over four quarters to dampen the variability inherent in the small area estimates.

The estimates presented in Tables 1 and 2 are derived from four primary data sources:

1. Current recipients of JobSeeker Payment and Youth Allowance (other) who are not on a zero rate of payment, by SA2;
2. ABS *Labour Force Survey* (LFS) data by SA4. The LFS samples private dwellings (approximately 24,000 dwellings) across Australia, resulting in a sample of around 50,000 people. More details about the methodology underpinning this survey are included in the ABS publication, [Labour Force, Australia](#);
3. Participation rate data at the SA2 level from the Census of Population and Housing (see the [Applying Census Benchmarks](#) section, below, for more detail); and
4. The latest Estimated Resident Population (ERP) estimates for persons aged 15 and over by sex by SA2 from the ABS release [Regional population by age and sex](#).

The purpose of SPREE is to produce small area labour market estimates that reflect the regional disparities of the Centrelink data, while being consistent with ABS LFS estimates.

Unemployment estimates are produced by apportioning the level of unemployment at the SA4 level, as published by the ABS, across each of the SA2s within that region. This apportioning is based on the distribution of Centrelink JobSeeker Payment and Youth Allowance (other) beneficiaries at the SA2 level, benchmarked by ABS unemployment estimates by age, sex and marital status at the Greater Capital City Statistical Area (GCCSA) level.

Labour force estimates are produced by:

- taking the participation rate for each SA2 from the Census (in instances where an SA2 does not have a participation rate, the participation rate for the Statistical Area Level 3 that the SA2 is within is used as a proxy);
- applying this to the latest available ERP data for persons aged 15 and over for the SA2, to produce a labour force weighting for the SA2 within the SA4; and then
- allocating the total labour force for each SA4 to the SA2s within that region according to the labour force weighting.

By using Census participation rates and the latest available ERP, the SA2 labour force estimates are able to adjust to changes in the distribution of population within a SA4 that have occurred since the last Census.

Please note that the ABS generally only publishes up-to-date ERP estimates for the latest (2021) edition of the ASGS. Where ERP data for an earlier ASGS are needed but not published on these boundaries by the ABS (for example, 2022 ERP on the 2016 ASGS for SALM estimates prior to the September quarter 2023) a population-weighted correspondence is used to produce the required figures on the appropriate ASGS.

Unemployment rate estimates are produced by calculating the level of unemployment as a proportion of the labour force (consistent with ABS methodology).

It should be noted that higher levels of caution should still be exercised when interpreting movements in the estimates for SA2s or LGAs with a labour force of less than 1,000.

Due to both the methodology used and the significantly higher variability of the data disaggregated below the SA2 or LGA level, it is not possible to derive reliable unemployment and unemployment rate estimates for particular groups (i.e. males, females, youth) within an SA2 or LGA.

Applying Census Benchmarks

To smooth out the impact of changes in SA2 participation rates between each *Census of Population and Housing* (conducted every 5 years), SALM incrementally phases in the Census benchmarks between each Census. The Census benchmarks for each of the 19 quarters between two Censuses (which occur every five years, or 20 quarters) are a weighted average of both Census results, based on how far the quarter is between the Censuses. Estimates from the September quarter 2021 onwards will use 2021 Census benchmarks until 2026 Census benchmarks become available.

- For example, the benchmarks for the unsmoothed estimates (the Census benchmarks are applied before the smoothing process) for the March quarter 2017 are the sum of 18/20ths of the 2016 Census benchmark and 2/20ths of the 2021 Census benchmark for each SA2. This is because the March quarter 2017 is two quarters away from the 2016 Census (the 2016 Census took place in the September quarter 2016) and 18 quarters away from the 2021 Census (the 2021 Census took place in the September quarter 2021).

The geographical structure used for SALM

From the September quarter 2023 edition of SALM, the SA2 estimates have been based on the ABS 2021 ASGS.

Due to changes in the ASGS between the 2016 and 2021 editions, there were a number of breaks in series at the SA2 level. As the production of *smoothed* SALM data requires four consecutive quarters of *unsmoothed* estimates, *smoothed* data for those SA2s and LGAs

that experienced a break in the *unsmoothed* series (between the June and September quarter 2023) are not available prior to the June quarter 2024. The only available estimates between the September quarter 2023 and the March quarter 2024, inclusive, for these SA2s and LGAs are from the unsmoothed series. As is always the case for unsmoothed data, it is important to exercise significant caution when examining and interpreting these figures, as they exhibit far greater volatility than the smoothed series.

- For more information on the ASGS changeover, please see the *SALM 2021 ASGS Changeover User Guide* available on the [SALM Methodology page](#). Similarly, the *unsmoothed* SALM estimates can also be downloaded from the SALM Methodology page.

Smoothed estimates not available for all regions

While most SA2s and LGAs have a complete time series of data, with *smoothed* SALM estimates available from the December quarter 2010 onwards, some regions have a shorter time series, while others have no estimates at all.

There are three reasons why data are not available for every SA2 and LGA:

1. A 'break in series': some regions have a break in series, such that only a partial time series is available. Most of the series breaks are a result of SALM transitioning to a new edition of the ASGS, as detailed above. SALM moved from the 2011 to the 2016 ASGS in the June quarter 2019 and from the 2016 to the 2021 ASGS in the September quarter 2023.
2. The SA2 is considered too small: there are around 120 SA2s which JSA considers have too small a population to produce estimates of a reasonable quality. As the reliability of estimates at the SA2 level are related to the size of the SA2, estimates are only published for SA2s that have an established labour force of 100 or more as at the September quarter 2023.
3. Other factors: while the underlying methodology used to produce the small area estimates in SALM is robust for the vast majority of areas, in a small number of cases it can result in figures that do not accurately reflect labour market conditions within the region. This is why no estimates have been published for the SA2 and LGA of Aurukun since the June quarter 2017.

Impact of corresponded ERP data on the SA2 estimates

The ABS is no longer producing ERP data on earlier editions of the ASGS. As SALM SA2 estimates up to the June quarter 2023 are based on either the 2016 or 2011 edition of the ASGS, it has been necessary to use a correspondence to produce ERP estimates for those SA2s which have experienced any geographic changes between the earlier editions of the ASGS and the 2021 ASGS (even if those changes were not large enough to constitute a break in series in SALM).

While the use of corresponded data may have had a small impact on the labour force and unemployment rate estimates for a small number of the affected SA2s, analysis undertaken by JSA suggests this will not have been significant. For more information please contact SALM@jobsandskills.gov.au.

Derivation of employment estimates

The data in Tables 1 and 2 in this publication are synthetic estimates, based on ABS unemployment and Centrelink JobSeeker Payment and Youth Allowance (other) beneficiary numbers and labour force data from the LFS and the Census. The production of SALM does not involve the use of any data that enables reliable modelling of employment at the small

area level. Nor does SALM attempt to estimate employment for either SA2s or LGAs. Accordingly, employment estimates should not be derived from SALM statistics. For more information, please email the SALM inbox at SALM@jobsandskills.gov.au.

Other sources of information

This publication, as well as data files in Excel format containing estimates back to the December quarter 2010, can be downloaded from the SALM page on the [JSA website](#).

Unsmoothed series

The *smoothed* estimates presented in Tables 1 and 2 are JSA's official estimates of unemployment and the unemployment rate at the SA2 and LGA level. It is recognised, however, that some advanced users may need access to the *unsmoothed* estimates, which are used to produce the official figures. They are available on the SALM Methodology page on the [JSA website](#).

Estimates on earlier editions of the ASGS

Smoothed SALM estimates based on the 2016 ASGS have been revised from the March quarter 2022 up to the June quarter 2023. If users need to obtain the revised SA2 or LGA estimates for past quarters based on the 2011 and/or 2016 ASGS (for example, for areas that have had a break in series), please email the SALM inbox at SALM@jobsandskills.gov.au.

Glossary of useful Small Area Labour Markets (SALM) terms and acronyms

ABS – see Australian Bureau of Statistics

ASGS – see Australian Statistical Geography Standard

Australian Bureau of Statistics (ABS)

Australia's national statistical agency. For more information, see the [ABS website](#).

Australian Statistical Geography Standard (ASGS)

The ABS' set of geographical classifications for Australia - SALM uses the ASGS Main Structure. SALM is currently based on Edition 3 of the ASGS (also referred to as the '2021 ASGS'). For more information on the 2021 ASGS, see the [ASGS publication page](#).

Breaks in series

A break in series occurs when a change to the geography of a region (or, in some cases, other factors) means figures for one period are not strictly comparable with figures for an earlier or later period. (This can happen when SA2 boundaries are changed due to ASGS revisions, for example.) In SALM, most [Statistical Area Level 2](#) and [Local Government Areas](#) have a complete [smoothed](#) time series back to the December quarter 2010.

SALM figures are also available prior to 2010, based on the [Australian Standard Geographical Classification \(ASGC\)](#). Even if a region maintained consistent geographic boundaries across the change from the ASGC to the ASGS, however, methodological issues mean that data from 2010 onwards are not strictly comparable with the ASGC estimates for earlier years.

For more information on SALM breaks in series, see the [SALM Methodology page](#).

Capital cities – see Greater Capital City Statistical Area

Centrelink data

For the purposes of the SALM publication, 'Centrelink data' refers to the following income support payments:

- JobSeeker Payment
- Youth Allowance (other)
- Newstart Allowance (replaced by the JobSeeker Payment in March 2020)

These payments are an important component of SALM, the purpose of which is to present small area estimates of unemployment that reflect the regional disparities of these Centrelink data. For more information on these payments, see the [JobSeeker Payment](#) and [Youth Allowance](#) pages on the Services Australia website.

Correspondence – see Geographic correspondence

COVID-19

Australia recorded its 100th case of COVID-19 in March 2020. This was also when the shutdown of non-essential services and trading restrictions took effect.

The 'Delta' wave began in mid-2021, leading to prolonged lockdowns, particularly in south-eastern Australia.

The 'Omicron' outbreak, in the first months of 2022, did not result in any lockdowns or travel restrictions, with the exception of Western Australia.

Employment

For the purposes of SALM, the term 'employment' refers to the ABS definition: people aged 15 years and over who worked for an hour or more during the survey reference week or for some cases where people had a job but were away from work (e.g., because they were unwell or were on leave). For a more comprehensive definition, see the Glossary on the [latest LFS methodology page](#).

ERP – see Estimated Residential Population

Estimated Resident Population (ERP)

The official ABS estimate of Australia's usually resident civilian population. SALM uses ERP estimates from the ABS' [Regional Population by Age and Sex](#).

GCCSA – see Greater Capital City Statistical Area

Geographic correspondence

Geographic correspondences are used to mathematically apportion data from one geographic area to another. For example, a population-weighted geographic correspondence is used to apportion SALM data from the [Statistical Area 2](#) level to the [Local Government Area](#) level. For more information about geographic correspondences, see the ABS' [Information Paper](#) on converting data to the ASGS.

Greater Capital City Statistical Area (GCCSA)

The GCCSAs form part of the ABS' ASGS Main Structure. GCCSAs can be divided into two groups: capital cities and rest of state areas. The capital cities are designed to represent the functional extent of each of the 8 capital cities, while the rest of state areas represent the remainder (the area not covered by the capital cities). See the [GCCSA section](#) of the 2021 ASGS publication page.

Jobs and Skills Australia (JSA)

The agency responsible for producing the SALM publication. Please see the [JSA website](#) for more information about the agency and its work.

JobSeeker Payment – see Centrelink data

JSA – see Jobs and Skills Australia

Labour force

In labour statistics, labour force refers to those people who are either [employed](#) or [unemployed](#).

Labour Force Survey (LFS)

A monthly survey carried out by the [Australian Bureau of Statistics](#) that provides information about the labour market activity of Australia's resident civilian population. [Unemployment](#) and [labour force](#) estimates from the LFS are important inputs into the process used to produce the SALM data. For more information about the LFS methodology, see the [latest LFS methodology page](#).

LFS – see Labour Force Survey

LGA – see Local Government Area

Local Government Area (LGA)

LGAs represent the ABS' approximation of gazetted local government boundaries as defined by each state and territory. LGA boundaries can change annually. JSA aims to publish SALM LGA data on the latest available LGA boundary structure in the ASGS. For more information on LGAs, see the [LGA page](#) of the 2021 ASGS publication page.

Mutual obligation requirements

Mutual obligation requirements are tasks and activities that people agree to do while they are receiving certain types of income support, including the [JobSeeker Payment](#) and [Youth Allowance \(other\)](#) payment. For more information about mutual obligation requirements, see the [Services Australia website](#).

Newstart Allowance – see Centrelink data

Rebenchmarking

The [Labour Force Survey](#) data upon which the SALM figures rely are based upon population estimates which are provisional and are revised as further relevant data become available. In the context of SALM data, earlier SALM estimates are revised periodically when the ABS rebenchmarks the LFS or [Estimated Resident Population](#) data which are used to produce SALM.

ABS LFS estimates are rebenchmarked on a quarterly basis so that they remain consistent with the latest available ERP data. As a result, earlier SALM estimates are also revised to reflect the latest available LFS data. For more information on rebenchmarking and its effect on SALM data, see the [SALM page](#).

Rest of state areas – see Greater Capital City Statistical Areas

SA2 – see Statistical Area Level 2

SA4 – see Statistical Area Level 4

SALM – see Small Area Labour Markets

Series break – see Breaks in series

Small Area Labour Markets (SALM)

Quarterly estimates of [unemployment](#) and the [unemployment rate](#) at the SA2 and LGA level produced by JSA, using the SPREE methodology. See the [SALM page](#) for more information.

Smoothed estimates

In SALM, 'smoothing' refers to the process of applying a 4-quarter rolling average to [unsmoothed](#) SALM estimates to dampen some of the variability that is inherent in the figures. For more information on smoothed SALM estimates, see the [Using SALM data – with caution](#) section on the SALM page.

SPREE – see Structure Preserving Estimation

Statistical Area Level 2 (SA2)

Relatively small (in terms of population size) general purpose areas that represent a community which interacts together socially and economically. The SA2 is the smallest area for which the ABS publishes non-Census data. For more information, see the [SA2 section](#) of the 2021 ASGS publication page.

Statistical Area Level 3 (SA3)

SA3s are often the functional areas of regional towns and cities with a population in excess of 20,000 or clusters of related suburbs around urban commercial and transport hubs within the major urban areas. They are formed by clustering groups of SA2s that have similar regional characteristics. For more information, see the [SA3 section](#) of the 2021 ASGS publication page.

Statistical Area Level 4 (SA4)

Areas that were primarily designed for the output of ABS [Labour Force Survey](#) (LFS) data. There are 87 SA4s for which LFS estimates are available. For more information, see the [SA4 section](#) of the 2021 ASGS publication page, noting that the ABS combines the two Western Australia - Outback SA4s (North and South) into a single region when producing LFS estimates.

Structure Preserving Estimation (SPREE)

The methodology used to produce the SALM estimates. In the context of SALM, SPREE seeks to produce reliable estimates of [unemployment](#), [labour force](#) and the [unemployment rate](#) that are consistent with the corresponding ABS [Labour Force Survey](#) figures.

Synthetic estimates

Estimates based on data that has been modelled, rather than collected directly from a census, survey or through administrative processes. SALM estimates are synthetic because they are generated using data from a combination of sources (census, survey and administrative) in a model (the SPREE methodology). Synthetic estimates are subject to modelling error, as well as the sources of error affecting their inputs.

Unemployment

For the purposes of the SALM publication, 'unemployment' refers to the ABS definition of unemployment: people aged 15 and over who were not employed during the survey reference week and were actively looking for work and available to start work. For a more comprehensive definition, see the Glossary on the [latest LFS methodology page](#).

Unemployment rate

The level of [unemployment](#) expressed as a percentage of the labour force.

Unsmoothed estimates

In the SALM publication, quarterly data are unsmoothed if they are not averaged (i.e., smoothed) over four quarters. JSA recommends the use of [smoothed](#) SALM data, where possible. Users should take care when interpreting unsmoothed SALM data as they can be highly volatile. More information on unsmoothed SALM data can be found on the [SALM – Methodology page](#).

Youth Allowance (other)– see Centrelink data
